

## **Eredivisie's vision for the future of UEFA Club Competitions post 2024**

The Eredivisie strongly believes in measures and plans for the future of European Club Competitions that could encourage further competitive balance both at international and at domestic level. The Dutch clubs cannot endorse plans which could weaken our national league and cup competition and which could create competitive dis-balance in our domestic competitions.

Change is necessary but we need to develop a model which could guarantee a sustainable future for both domestic and European competitions. More specifically:

### **Format & Access:**

- The league is open to play more matches in UEFA club competitions but not at the expenses of the national league or cup competition.
- Sporting results and performance in the national league and cup competition should be the main criterium for access to the UEFA competitions

### **Revenue Distribution:**

- We support the idea to discuss the revenue distribution model as a factor interlinked with the other dimensions of UCC such as format, access and coefficient.
- We propose to formulate a more equal distribution and solidarity model on broadcasting, digital and commercial revenues within the 3 UEFA Club Competitions but also between the same.

The Eredivisie is looking forward to an open and transparent decision making process so that UEFA could find an agreement with the football stakeholders for the good of the whole football family.
